When ceramides are present in high levels, they can cause fat to flood your bloodstream after each meal. This fat gets stored around your belly, hips, and internal organs. It slows down digestion, triggers fatigue, and keeps your metabolism stuck in low gear. No matter how much you exercise or how carefully you eat, your body struggles to release the fat because it's overwhelmed by this internal traffic jam.

According to the makers of this juice, the real problem behind stubborn belly fat isn't just poor eating habits or a slow metabolism. They stick to your internal organs, especially your liver and pancreas, and make it harder for your body to break down fat, absorb nutrients, and burn calories efficiently.
